These gallstones have a direct impact on your overall health and they can shape your personality! Its weird because nearly everybody has gallstones, but nobody knows about it Some people need to get surgery and have their gallbladder removed, having to live the rest of their lives with malabsorptions and deficiencies due to the incomplete digestion of fat. In fact, when we take in toxins (it doesnt matter if we take them in by inhaling polluted air, by eating toxic food, or by putting chemicals on our face), all these toxins get into our bloodstream. Our liver then filters them all out, and will start to modify them in a way that will make them inoffensive, and easy to excrete. The liver evacuates these toxins in many ways, but the main exit of these modified toxins are the biliary ducts. Thats right, our bile is not only used for digestion, but also for evacuating the toxins! You can now see the problem of having bile ducts being blocked with gallstones. The liver cant excrete its bile effectively anymore and the toxins are backing up inside the liver cells. The liver cant do its job anymore of keeping your body free from garbage. The cells are getting intoxicated and die faster which then causes their own problems. With this book, Ill take you by the hand
