

A Fight for Life: Beating Cancer

The world changes at the very moment you learn that you have Cancer or any other life-threatening illness. It gives you an exclusive membership into a private club where all of the members can help each other by sharing their similar experiences. The outside world has no idea what it takes to survive the battles in this life-long war. Your family, friends, and doctors become the soldiers on your side and you will acquire strength from many different places. The disease will attack at the most inopportune of times and won't care who you are, how many political connections you have, or how good you have been. It will inevitably be relentless in its pursuit of your life. I hope that this book can provide another weapon for the many Cancer patients and/or survivors out there to use in their ongoing fight against this evil disease. Good Luck To All!
