

Breast Cancer (M.D. Anderson Cancer Care Series)

BREAST CANCER is the first volume of The MD Anderson Cancer Care Series, featuring the best standard treatment protocols from the experts at MD Anderson Cancer Center. As more is learned about the relative roles of different treatment modalities, a pattern of practice is emerging where several different disciplines are involved early in the diagnostic and treatment phases of breast cancer. The impact of new and established diagnostic approaches that utilize radiodiagnosis and pathology in combination are requiring that a full range of special expertise from these disciplines be made available to patients. This clinical guidebook is an essential resource for the busy practitioner, allowing for quick, authoritative access to the latest and best in multimodality therapies. Topics covered in this volume include screening for early detection of breast cancer, hereditary breast/ovarian cancer genetic syndromes, diagnostic radiology, ultrasonography, pathology, surgical options, radiation therapy for early and advanced breast disease, tumor markers, standard and high-dose chemotherapy, hormonal therapy, reconstructive surgery, post-treatment rehabilitation, and symptom management and quality of life. Over 125 photographs and line-drawings illustrate the principles discussed in the text. This handbook will become an important guide and resource for community oncologists, as well as general surgeons, internists, and family practitioners.
