

# A Practical Handbook of Trees, Shrubs, Vines and Herbaceous Perennials (Classic Reprint)

Its form has been suggested by the needs encountered during a long period of private and commercial association with plants, when the material here set forth would at times have been most useful. It is as a reference book that it will take its place. Exhaustive descriptions, variations from type, and more technical matter must be sought among the horticultural encyclopaedias. In these pages, however, will be found general cultural information and directions sufficient for all ordinary requirements. When and how to plant, pruning, spraying and cultivation are each treated comprehensively. Propagation has not been touched upon, as it is a generally accepted fact that trees and plants, of sizes suitable for planting in their permanent places, can be more easily obtained from reliable nurserymen, and give, as a rule, better satisfaction to the amateur gardener. Trees, shrubs and plants have been classified according to their suitability for certain purposes. Space is given to the making and proper care of lawns. The more common injurious insects are described, and means for their extermination are discussed. In short, the author has earnestly endeavored to include whatever information the average householder needs to enable him to make a selection of such trees and plants as are best adapted to his purposes, and to aid him in properly caring for the grounds about his home. Regarding the plants themselves, doubtless many omissions will be found from the more or less familiar sorts; but let it here be said that only such are included as have proved their worth under ordinarily favorable conditions of cultivation and climate. (Typographical errors above are due to OCR software and do not occur in the book.) About the Publisher Forgotten Books is a publisher of historical writings, such as: Philosophy, Classics, Science, Religion, History, Folklore and Mythology. Forgotten Books Classic R
