

## BELEODAQ (Belinostat): Treatment of Patients with Relapsed or Refractory Peripheral T-Cell Lymphoma (PTCL)

Although, your health condition may impact your everyday life, do not let it define who you are. BELEODAQ (Belinostat) is used to treat peripheral T-cell lymphoma (PTCL; a form of cancer that begins in a certain type of cells in the immune system) that has not improved or that has come back after treatment with other medications. Belinostat is in a class of medications called histone deacetylase inhibitors. It works by killing cancer cells. Thanks and may you have a good understanding about this drug BELEODAQ (Belinostat). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
