

Trapping neuronal cells may aid in the creation of the cultured neuron probe. The aim of the development of this probe is the creation of the interface between neuronal cells or tissues in human body and electrodes that can be used to stimulate nerves in the body by an external electrical signal in a very selective way. In this way, functions that were (partially) lost due to nervous system injury or decease may be restored.

Advances in Anatomy, Embryology, and Cell Biology [2003, 173:III-IX, 1-77]. **Neural Substrates of Memory, Affective Functions, and - Springer** Dielectrophoretic Trapping (Advances In · Anatomy, Embryology And Cell Biology) Electric Field-Induced Effects on Neuronal Cell Biology Accompanying **Funny Frog Stories - Amazing Frog Facts For Kids** Mar 29, 2017 By application of dielectrophoresis neuronal cells can be trapped The creation of an electric field in high conductivity of the medium results in local heating, which in turn induces fluid flow. This flow also drives the neurons and was found to enhance the trapping effect of the dielectrophoretic force. With the **The Subchondral Bone Plate Magdalena Muller-Gerbl**
