

Fungal Infections in Tissue Volume 4

A quick reference book for medical professionals, laboratory technicians, medical students, and infectious diseases specialists for fungal diagnostics in tissue. In this volume, we discuss: Actinomycosis, Adiaspiromycosis, Aspergillosis, Penicillium marneffeii, Phaeohyphomycosis, Protothecosis, Trichosporon, and Nocardiosis. The book provides images of the fungi under the microscope and short descriptions about them.
