

GARDASIL (HPV Vaccine): Prevents Cancer and Abnormal or Precancerous Diseases of the Cervix Caused by 2 Specific Types of Human Papillomavirus (HPV), in Girls and Women 9 To 26 Years of Age

GARDASIL (HPV Vaccine): Prevents Cancer and Abnormal or Precancerous Diseases of the Cervix Caused by 2 Specific Types of Human Papillomavirus (HPV), in Girls and Women 9 To 26 Years of Age

Although, your health condition may impact your everyday life, do not let it define who you are. GARDASIL (Human papillomavirus (HPV) vaccine) is an active immunizing agent that is used to prevent infection caused by human papillomavirus (types 16 and 18). It works by causing your body to produce its own protection (antibodies) against the virus. HPV infection is usually a sexually transmitted disease (STD) and is easily spread by having sex with an infected person. This vaccine helps prevent cervical cancer and abnormal or precancerous diseases of the cervix in girls and women 9 to 26 years of age. This vaccine will not treat these diseases or protect you against diseases that are caused by other HPV types. The vaccine will also not protect you against other sexually transmitted diseases that are not caused by HPV. Thanks and may you have a good understanding about this drug GARDASIL (Human papillomavirus (HPV) vaccine). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
