

“Although, your health condition may impact your everyday life, do not let it define who you are.” Levothyroxine, a thyroid hormone, is used to treat hypothyroidism, a condition where the thyroid gland does not produce enough thyroid hormone. Levothyroxine is also used to treat congenital hypothyroidism (cretinism) and goiter (enlarged thyroid gland). Levothyroxine is also used with surgery and radioactive iodine therapy to treat thyroid cancer. Levothyroxine is in a class of medications called hormones. It works by replacing thyroid hormone that is normally produced by the body. Thanks and may you have a good understanding about this drug—Synthroid (levothyroxine). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
