

Students of evolutionary and behavioural ecology are often unfamiliar with mathematical techniques, though much of biology relies on mathematics. Evolutionary ideas are often complex, meaning that the logic of hypotheses proposed should not only be tested empirically but also mathematically. There are numerous different modelling tools used by ecologists, ranging from population genetic bookkeeping, to game theory and individual-based computer simulations. Due to the many different modelling options available, it is often difficult to know where to start. Hanna Kokko has designed this 2007 book to help with these decisions. Each method described is illustrated with one or two biologically interesting examples that have been chosen to help overcome fears of many biologists when faced with mathematical work, whilst also providing the programming code (Matlab) for each problem. Aimed primarily at students of evolutionary and behavioural ecology, this book will be of interest to any biologist interested in mathematical modelling.

Daughters Of The Desert: Stories Of Remarkable Women From Christian, Jewish, And Muslim Traditions, Architecture and Language: Constructing Identity in European Architecture, c.1000-c.1650 (Hardcover) by Clarke, Georgia published by Cambridge University Press, Physicians Desk Reference 1977, 31st Edition, Scope and Standards of Pediatric Nursing Practice: (American Nurses Association), Lippincotts Review for NCLEX-RN®, Understanding Pharmacology, Schools,: One of a series, (Contemporary American architecture), Case Studies in Trauma Nursing, Studyguide for Essentials of Nursing Research: Appraising Evidence for Nursing Practice by Polit, Denise F., The Morphology of Human Blood Cells, 5th Edition (No.97-1511),
