

## Atlas of MR Pathology, 1e

This comprehensive atlas illustrates the appearance of anatomy and disease processes on MR scans. Demonstrates the variation in disease process, filming, and positioning through the use of real, rather than posed, MR images. Includes definitions and explanations of the disease process, suggested sequence weightings, anatomic planes to scan in, and the use of MR contrast material. An excellent reference and study guide, the atlas is organized on the basis of anatomical region in accordance with the ARRT MR exam format.
