

# The Impact of Demographics on Health and Health Care: Race, Ethnicity and Other Social Factors (Research in the Sociology of Health Care)

This volume focuses on differences in health and health care as linked to important social factors. The first section reviews basic material on the topic. The second section on racial and ethnic factors in differences in health and health care is the largest section of the book, and includes six articles looking at racial disparities on a variety of topics such as: knowledge of hepatitis C Virus; health services received and patients experiences in seeking health care; use of CAM (complementary and alternative medicine) services; and, the role of social capital in class and race health disparities in health information seeking behaviour. Further sections include articles focused on geographic and community factors, gender and age, gender and language, and lifecourse issues such as maternal depression and hospice care. Research in the Sociology of Health Care, Volume 28 is essential reading for medical sociologists and people working in other social science disciplines studying health-related issues. It provides vital information for health services researchers, policy analysts and public health researchers.
