

This book enhances the readers understanding of the nature and presence of risk by raising the organisations awareness of the risks it faces, and formalising the systems needed to deal with and learn from those risks. While based on the experience of the construction industry, the book also acts as a broader project management text, meeting the needs of project managers and students in many disciplines and professions from architecture and construction through engineering and commerce to IT, finance and banking. Essential for anyone studying or involved in organisational decision-making for projects, this book will help readers to develop confidence in dealing with risk in a systematic manner.
