

The Year in Small Animal Medicine

Veterinary practitioners are faced with an explosion of information in many media, but the core of their professional development remains keeping up with journals in their fields. This Year in volume exists to survey the whole range of relevant small animal publications, to pick out the papers making a significant contribution, to comment on these, and then to draw together the strands from a related group of papers and identify the implications for clinical practice. The Year in Small Animal Practice is a comprehensive resource that draws on the best of the recently published literature. Nearly 200 papers are identified and evaluated by an expert team of authors, providing clinical guidance on 15 key specialties.
