

SMALL ANIMAL EMERGENCY AND CRITICAL CARE is the first book in the field written expressly for veterinary technicians. Efficiently organized for fast consultations, it provides quick access to dozens of common, life-saving protocols and procedures. Section I includes chapters on assessment, equipment, and a multitude of therapies and techniques such as fluid therapy, oxygen therapy, transfusions, and more. Every procedure is thoroughly illustrated and described, step-by-step. Details include important coverage of common drugs used to stabilize and maintain patients, with the mode of action and dosages. Section II addresses specific systemic problems, such as hematologic, cardiovascular, and GI emergencies, shock and trauma. The emphasis throughout is on total team management of the critical animal patient. The book concludes with a sensitive chapter on the importance of scheduling to those who care for acutely compromised patients.

Manual de logopedia (Spanish Edition), Terapia de escucha / Listening Therapy (Spanish Edition), Sea-Fishing on the English Coast (Classic Reprint), The Beaverkill: The History of a River and Its People, revised and updated, Schmerzbehandlung in der Palliativmedizin (German Edition), Plasminogen-Related Growth Factors (Novartis Foundation Symposia), Manual of Primary Health Care: Its Nature and Organization (Oxford medical publications), Bede Griffiths: An Introduction to His Spiritual Thought,
