

World Health Statistics 2008

This annual edition presents the most recent statistics since 1990 of over 80 health indicators for WHO's 193 Member States. This fourth edition includes an expanded set of over 76 key indicators and a section with 10 highlights in global health statistics in the past year. This book has been collated from publications and databases of WHO's technical programs and regional offices. The core set of indicators was selected on the basis of relevance for global health, availability, and quality of data, and accuracy and comparability of estimates. The statistics for the indicators are based on an interactive process of data collection, compilation, quality assessment, and estimation between WHO technical programs and its Member States. In this process, WHO strives to maximize accessibility, accuracy, comparability, and transparency of country health statistics.

In addition to national statistics, this publication presents statistics on the inequalities in health outcomes and interventions coverage within countries, disaggregated by urban/rural setting, wealth/assets, and educational level. Such statistics are primarily derived from the analysis of household surveys and are only available for a limited number of countries.
